PROJECTS

Medical Insurance Cost Prediction

Sep 2025 – Oct 2025

NumPy, Pandas, Scikit-learn, TensorFlow

ML Project

Built an ML-based insurance cost prediction system on 1,338 records, achieving 98.5 R^2 using explainable AI and deployed via Streamlit.

Trained and compared 6+ ML models including Linear Regression, Random Forest, Gradient Boosting, CatBoost, CNN, and CNN-LSTM.

Reduced prediction error by 40% compared to baseline linear regression using ensemble and deep learning techniques.

PodStream – Podcast Streaming Web App

Jul 2025

React.js, Vercel, GitHub

Live: pod-stream-beige.vercel.app

Developed and deployed a full-stack podcast streaming web application using React.js and hosted on Vercel.

Designed a responsive and modern UI with seamless audio playback and mobile-first performance.

Implemented version control using Git and GitHub with continuous integration for automated deployment.

Skin Cancer Detection using CNN

Aug 2024 – Dec 2024

Deep Learning, Python

EfficientNetB2, Web App

Trained a deep learning model (EfficientNetB2) using skin lesion images for automated skin cancer detection.

Classified skin lesions into Melanoma, BCC, SCC, and benign categories with high accuracy.

Deployed a FastAPI backend to handle image inference and prediction workflows.
